Diagram 4: IIGCC Climate Resilience Investment Framework (CRIF)

The CRIF is an investor-centric framework that operationalises the assessment, management and reporting of physical climate risks and resilience-building actions within investment processes.

It revolves around an iterative, principles-based cycle – Physical Climate Risk Assessment Methodology (PCRAM) – and aligned with leading global standards such as IFRS S2, ISO 140091, with the inclusion of nature and local context into adaptation.
